

Precision Livestock Farming: opportunities for herd management

Erwin Koenen

CRV

Cooperative herd improvement organisation

- genetics
- management information
- services

Focus on herd management

- Good herd management is key
- CRV helps farmers with solutions to improve herd performance
- How can Precision Livestock Farming create value?

Examples to create value for farmers

- 1. Ovalert concept using mature PLF technique within a total solution concept
- 2. <u>SmartDairyFarming project</u> creating synergy and new innovations in production chain

1. Ovalert®

- Focus on fertility management
- Reliable heat detection based on activity data
- Ovalert is an integrated fertility solution
 - partners provide sensor technology
 - CRV provides information, genetics and fertility services

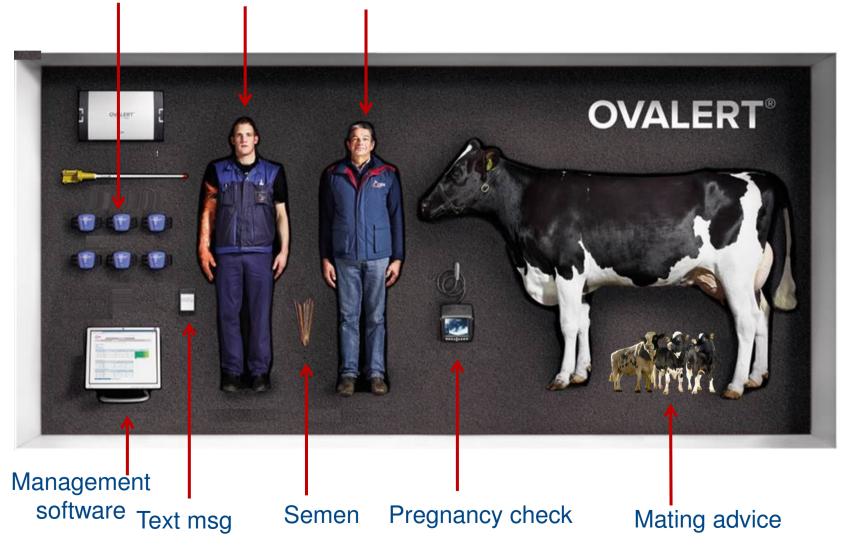

Ovalert®

Activity sensors AI service Fertility consultancy

2. SmartDairyFarming Project (2011-2014)

Main objective

support farmers with their main herd management processes (young stock rearing, fertility and transition)

Large consortium

- 3 large farmer cooperatives
- 7 SME companies
- universities, research institutes, agricultural colleges
- 7 commercial dairy farms

SmartDairyFarming Project: results

Improved sensor technology

- improved bolus to record rumen pH
- validation of body weight recording and activity sensors

Decision support

improved standard operating procedures (SOPs)

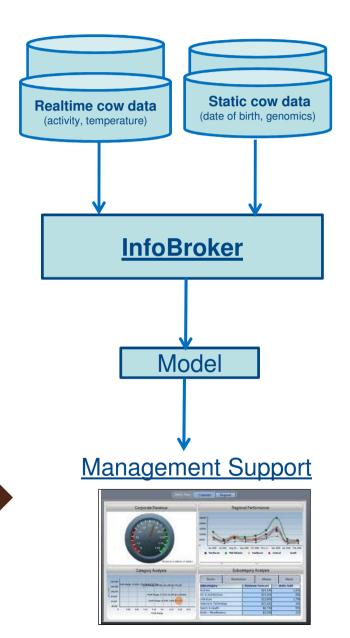

New concept infrastructure PLF data production chain

InfoBroker

InfoBroker concept

- Aim: facilitate linking and using data
- Platform for data providers and users
- A broker:
 - connects to data stored externally
 - no central database
- Current size:
 - 7 dairy farms / 1500 animals
 - 20 sensors / 10 providers
 (milk yield, activity, body weight)
 - Managed by nonprofit organisation
- Business model
 - fixed fee (connections)
 - variable fee (pay-per-view)

Challenges

Technical challenges

- new applications for more complex processes
- use genomic data: e.g. cow-specific feeding
- exploitation of big data

Commercial challenges

- closed vs open data platforms
- data ownership and privacy
- business models

Conclusions

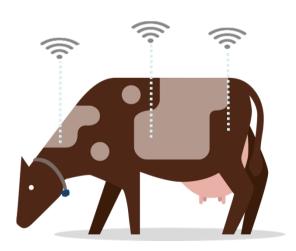

PLF creates value to current and future herd management

Implementation of PLF technology depends on

- value proposition (stand-alone vs total solution)
- collaboration at chain level

Further innovations will benefit from

- stronger focus on farmers' needs
- new techniques to analyse data
- exploration of new business models data

Thank you for your attention!
